	Urgent	**Not Urgent**
Important	**Do - (Your MVP)** ● Read log file and then parse each line into a separate file ● Build system to detect brute force and suspicious attacks ● Print summary of all flagged IPS into console	**Schedule - (For V2.0+)** ● Utilize HIBP to check for leaked and breached/compromised passwords online ● Flagging patterns between different IP's incase of a distributed attack ● Specify what type of attack each malicious attempt uses, and leave suggestions on response
Not Important	**Delegate - (Use a library)** ● Use BufferedReader not a custom file reader ● Use java.util.regex instead of string-chopping manually	**Delete - (Cut it)** ● Auto block suspicious IP's using the firewall ● Live feedback with log-watching and monitoring in real-time.

	● Java.time no independent data or timestamp logic	● Machine-learning and adapting anomaly recognition and prevention
